

```
public class Main {
    static int mod = (int) 1e9 + 7;
    static Scanner sc = new Scanner(System.in);
    static StringBuilder sb = new StringBuilder();
    ...
    public static void solve(int n, int x) {
        int a0 = 0;
        ...
        for (int i = 0; i < n; i++) {
            pre = cur;
            cur = Integer.parseInt(sc.next());

```

```
        if (i != 0) {
```

<Prefix>

```
        <Fill-in-the-middle>
```

```
    }
```

<Suffix>

```
    max = Math.max(cur, max);
    min = Math.min(cur, min);
}
```

Base Code Model

Generated Code

```
ans += Math.abs(cur - pre);
```

Instruct Code Model

Generated Code

```
ans += Math.abs(cur - pre);
}
if (i != 0 && i != n - 1) {
    ans += Math.min(Math.abs(cur - a0), Math.abs(an - cur));
}
if (i != 0 && i != n - 1) {
    ans += Math.min(Math.abs(a0 - cur), Math.abs(cur - an));
}
```
